Forward

All entries in this booklet have made application for certification. However, certification status will not be granted until field inspection and laboratory tests are complete.

The Illinois Crop Improvement Association (Illinois Crop) certifies seed of all crops for varietal purity and identity only. Information concerning germination and mechanical purity, such as percent inert matter and percent weed seed, must comply with state and federal seed laws. Proper labeling of seed with this information is the responsibility of the seed producer or seed dealer.

Please remember that for varieties where plant variety protection has been applied for, or has been granted, the proper statement to this effect must be attached to each container.

Illinois Crop Procedures

1. Contact Illinois Crop before planting for an application to grow Foundation, Registered, Certified or Quality Assurance seed.
2. For Foundation seed production, plant Breeder or Foundation seed. For Registered seed production, plant Foundation seed. For Certified seed production, plant Foundation or Registered seed. For Quality Assurance seed, plant quality seed of known varietal purity and identity.
3. Save tags to establish proof of seed origin and class (all crops) and submit a variety description/statement of origin at the time of application.
4. Select clean, weed-free ground. Check the Illinois Crop regulations to see if the field meets all of the requirements, such as isolation from other varieties and crop history of the land from the previous year.
5. Clean planting equipment before planting.
6. Submit the proper application and fee.
7. Rogue the field for other crops, varieties and weeds.
8. Make sure the field inspection has been completed by an Illinois Crop inspector before harvesting.
9. Clean the combine, transporting equipment and storage facilities to remove crop and weed seeds before harvesting.
10. Submit an uncleaned and/or cleaned sample as required (See Procedures Manual) to the Illinois Crop laboratory for analysis.
11. Contact Illinois Crop with tag orders after receiving laboratory reports.
12. The certification, for all classes, is considered “completed” following compliance with all final lab requirements and attachment of tags to bags. QA tag use is optional, but final lab requirements apply.

Plant Variety Protection

Protected varieties are marked with the following symbol: 

The developer of a new distinct variety may obtain protection (essentially a patent) for that variety if he or she chooses to do so, provided the variety meets the requirements of the Plant Variety Protection Act (PVPA).

The developer of the variety may sell either certified or non-certified seed of the variety (U.S. protected variety statements below).

The developer may choose to utilize the provisions of the Title V of the Federal Seed Act in which the variety may only be sold by variety name only as a class of certified seed.

The PVPA 1994 insures that the variety may not be sold farmer-to-farmer without permission from the developer.

If the developer of a protected variety has reason to believe that anyone is infringing on his rights, he or she may resort to civil action.

It is the responsibility of the seller to inform the buyer if the variety is protected. Each container of seed sold must be labeled with a tag indicating the type of protection for which the owner has applied.

Failure to print proper PVPA statements violates the intellectual property rights of those who protected the variety.

Listed below are types of protection and their coordinating PVPA statements:

U.S. protected variety:

Unauthorized propagation prohibited. U.S. protected variety.

U.S. protected variety, PVPA 1994:

Unauthorized propagation prohibited. U.S. protected variety. PVPA 1994.

U.S. protected variety, Title V:

Unauthorized propagation prohibited. U.S. protected variety. Seed of this variety is to be sold by variety name only as a class of certified seed.

Plant Variety Protection - Continued

U.S. protected variety, Title V, PVPA 1994: **Unauthorized propagation prohibited. U.S. protected variety. Seed of this variety is to be sold by variety name only as a class of certified seed. PVPA 1994.**

For the time when a PVP application is submitted until the PVP office has approved it, the following statement is used: **Unauthorized propagation prohibited. U.S. variety protection applied for. PVPA 1994.**

Check a variety's PVP status on the U.S. PVP's web site at: <https://www.ars-grin.gov/cgi-bin/npgs/pvp/pvplist.pl>

Bulk Transfer - Uncleaned Seed

A bulk transfer is necessary when unconditioned seed is transferred from the seed producer to another for the purpose of cleaning, bagging or selling. A bulk transfer form must be filled out at the time of transfer. A \$49 fee will be assessed to the seed producer for each bulk transfer. Refer to the Illinois Crop Improvement Handbook of Seed Certification for complete details regarding membership and Approved Conditioner Sampler requirements.

Bulk Sale - Cleaned Certified Seed

The bulk sale of Certified class seed applies only to wheat, barley, oats, rice and soybeans. When a producer wishes to sell bulk, cleaned, Certified seed to another to use for planting stock, it is considered a bulk sale of Certified seed. The seed may be transferred once prior to movement to the ultimate consumer. It is the responsibility of the seedsman and retailer to maintain varietal purity if a transfer is made. The original bulk sale certificate holder is to provide photocopies to accompany any further sale from the intermediary to the farmer. A bulk retail sales certificate must be filled out for each lot of seed sold. These certificates are available from the Illinois Crop office. Fifteen cents per bushel will be assessed on each bulk sale.

Limited Generation

There are only four classes of certified seed recognized in the limited generation program.

1. **Breeder's Seed**—which may produce Foundation seed.
2. **Foundation Seed**—which may produce Registered and Certified seed.
Note: Some varieties do not have a Registered class of seed.
3. **Registered Seed**—which may produce Certified seed.
4. **Certified Seed**—which cannot be used to produce more Certified seed.

The Certified class of seed is not eligible to produce another crop of Certified seed. A certified seed producer, to stay in business, should purchase Foundation or Registered seed to remain a certified seed producer.

Varieties released in 1963 and later are included in the limited generation program.

It should be understood by everyone that this limited generation program system of seed certification does not apply to the old established varieties released prior to 1963 such as Monon and Pawnee wheats. Certified seed of these old standard varieties, released before 1963, may be re-certified from Certified seed as long as they comply with both the field and laboratory standards, or until they are replaced by a new variety. In other words, varieties released prior to 1963 are not included in limited generation. Varieties released in 1963 and later are included in the limited generation program.

Research Assessment Rates for Public Wheat Varieties

Research and development fees are sent to developing universities to help support new agronomic research. The following list contains only wheat varieties certified in Illinois. The assessment fees will be collected at the time the tags are issued.

Approved Conditioner and Sampler Program

The objective of the Approved Conditioner and Sampler Program is to set a uniform minimum standard for conducting seed conditioning operations necessary to maintain the genetic purity of seed and other products throughout the harvesting, storage, handling and conditioning processes as part of an authorized Illinois Crop authentication program. Approval is granted on an annual basis and may be granted for conditioning, sampling, closing and sealing, labeling and bulk transfer for all crops, specific crops, specified conditioning activities or sampling only.

Barley

Varieties Grown in Illinois

LCS CALYPSO

LICENSED VARIETY

LCS Calypso is a two-row winter malting barley that was bred by Limagrain Europe s.a. in France. This cultivar is widely adapted to the eastern US winter malt barley growing regions. Selection criteria for LCS Calypso were disease resistance, lodging, yield and quality. The overall plant height is considered short and is mid-season for 50% flowering. The stem is typically 4 nodes above ground. The basil leaf sheath is pubescent and the flag leaf is waxy and drooping at boot stage. Seed head is two rowed, erect, slightly waxy and lacking hairs on the edge of the rachis. Kernels are covered, 9.0 to 10.5 mm in length, slightly wrinkled, long awned, and the aleurone layer is blue. Average 1,000 seed weight is 36 grams. Variants may include taller plants up to 0.1% that can be up to eight inches above the canopy, and up to 0.1% later drooping heads. Recognized classes of seed are Breeder, Foundation, Registered, and Certified. The PVP statement for LCS Calypso is “Unauthorized propagation prohibited. U.S. protected variety. PVPA 1994”

County	Name
Moultrie	Kitchen Seed Company, Inc.

Barley

Varieties Grown in Illinois

VIOLETTA LICENSED VARIETY

Violetta is a 2-row malting barley variety bred and developed by the Breun breeding program in Germany. Violetta is being marketed in the US by Limagrain Cereal Seeds. The cultivar Violetta was selected for commercial release due to its malting quality, resistance to pre-harvest sprouting and plant type and numerous other characteristics related to yield and quality as well as earliness and winter hardiness. This variety exhibits tolerance to powdery mildew, BYDV, net blotch, leaf rust and scald. Violetta has semi-erect/semi-prostrate juvenile plant growth habit. Leaf color at booting is green and the flag leaf is erect, and twisted with no pubescence on leaf blade or sheath. Auricle color is white. Spikes of Violetta are oblong in shape, mid-dense, inclined at maturity. Plant height is 80 cm or approximately 31.4 inches. Kernels are covered, semi-wrinkled and aluerone layer is colorless. Recognized classes of seed are Breeder, Foundation, Registered and Certified.

Winter Wheat

Varieties Grown in Illinois

25R61

25R61 is a soft red winter wheat variety bred and developed by Pioneer Hi-Bred International, Inc. 25R61 has shown best adaption to the northern US soft wheat region. The cultivar 25R61 was selected for disease resistance, plant type and numerous other characteristics related to yield and quality. This variety exhibits strong resistance to leaf rust and very good resistance to Fusarium head blight (scab), powdery mildew and soil-borne mosaic virus. The coleoptile color of 25R61 is white with semi-erect juvenile plant growth habit. Leaf color at booting is green and the flag leaf is erect, twisted and has wax present. Auricle color is white and anther color is yellow. Spikes of 25R61 are awned, dense, tapering in shape and nodding at maturity. Plant height is 91.4 cm and 128 days to 50% heading. 25R61 has shown awnless and/or taller variants up to 0.1%. Recognized classes of seed are Breeder, Foundation, Registered and Certified. *The PVP statement for 25R61 is “Unauthorized propagation prohibited. U.S. protected variety. PVPA 1994”

Winter Wheat

Varieties Grown in Illinois

25R74 PVP

25R74 is a soft red winter wheat variety bred and developed by Pioneer Hi-Bred International, Inc. 25R74 has shown best adaption to the northern US soft wheat regions. The cultivar 25R74 was selected for disease resistance, plant type and numerous other characteristics related to yield and quality. This variety has shown high resistance to powdery mildew and stripe rust and intermediate resistance to Fusarium head blight (scab), leaf rust and soil-borne mosaic virus. The coleoptile color of 25R74 is red with erect juvenile plant growth habit. Leaf color at booting is yellow-green and the flag leaf is erect, twisted and has wax present. Auricle color is purple and anther color is yellow. Spikes of 25R74 are awned, lax, oblong in shape and nodding at maturity. Plant height is 83.8 cm and 128 days to 50% heading. 25R74 has shown awnless variants up to 0.5%. Recognized classes of seed are Breeder, Foundation, Registered and Certified. *The PVP statement for 25R74 is “Unauthorized propagation prohibited. U.S. protected variety. PVPA 1994”

County	Name

Winter Wheat

Varieties Grown in Illinois

25R76*

25R76 is a soft red winter wheat variety developed by Corteva Agrisciences. This variety is best adapted to the northern US soft wheat growing regions. 25R76 was selected for plant type and height, head type, straw strength, yield, maturity, test weight, and milling and baking characteristics. This variety has shown a high level of resistance to soilborne mosaic virus and an intermediate resistance to fusarium head blight and stripe rust. The coleoptile color is red with semi-erect juvenile growth habit. Leaf color is green at booting and the flag leaf is erect, twisted and waxy. Plant height is 89cm and 128 days to 50% heading. The auricle and anther colors are purple. The spikes are awned, mid-dense and the shape is tapering, inclined with hollow internodes. The glumes are non-pubescent, short and the color is white/amber. The beak is medium in length and acute. The shoulder shape is rounded and medium in width. 25R76 has amber seed color and the shape is ovate with angular cheeks. This variety has an average 1,000 kernel weight of 37 grams. 25R76 may have a variant of awnless and/or taller plants at a frequency of up to 0.1%. Recognized classes of seed are Breeder, Foundation, Registered, and Certified. *PVP is anticipated for 25R76. The Title V certification option will not be elected.

Winter Wheat

Varieties Grown in Illinois

Bess

Bess is a soft red winter wheat variety bred and developed by the University of Missouri Agricultural Experiment Station. Bess is a white chaffed, apically awnletted variety with an average height of 38 to 40 inches and good straw strength. This variety is moderately early maturing averaging 1 to 2 days later than Ernie, 1 to 2 days earlier than Roane and 5 days earlier than Truman. It has good resistance against fusarium head blight (scab). Bess is moderately resistant to stripe rust but is considered susceptible to both leaf rust and stem rust. It has intermediate field reaction to septoria leaf blotch and is moderately resistant to soil-borne mosaic virus and moderately susceptible to wheat spindle streak virus and barley yellow dwarf virus. Bess is susceptible to all races of Hessian fly. Up to 1% variant described as taller and shorter awned heads; taller tip awned lax heads; tall awnletted variants including those with light green heads and blue-green awnletted variants are allowed. Recognized classes of seed are Foundation and Certified.

County	Name	Acres:	Reg.	Cert.
Madison	Hamel Seed & Farm Supply, Inc.		0	101

Branson

Branson is a soft red winter wheat variety bred and developed by AgriPro Wheat. Branson is a medium height semi-dwarf variety with good straw strength. This variety is moderately resistant to septoria leaf blotch, stripe rust and powdery mildew. Branson is intermediate resistant to soilborne mosaic virus and leaf rust. Juvenile growth habit is semi-erect with dark green plant color at the boot stage. Flag leaf at boot stage is erect and twisted. Anther color is yellow and head shape is strap, mid-dense and awnletted. Glumes are glabrous, narrow in width and long in length with oblique shoulders and obtuse beaks. Seed shape is ovate. Brush hairs are mid-long in length and occupy a large area of the seed tip. Seed cheeks are rounded and the crease depth is shallow and width is narrow. Up to

Winter Wheat

Varieties Grown in Illinois

Branson (continued)

0.8% variant plants described as taller in height and/or awned may be encountered. Recognized classes of seed are Foundation, Registered and Certified. The PVP statement for Branson is “Unauthorized propagation prohibited. U.S. protected variety. Seed of this variety is to be sold by variety name only as a class of certified seed. PVPA 1994.”

County	Name
Clinton	Hoffman Seed House, Inc.

Roane

Roane is a full-season, awnleted, soft red winter wheat released by the Virginia Agricultural Experiment Station. Plant color is blue green at booting. Flag leaf at booting stage is recurved and twisted. Plant height is 1 inch taller than Coker 9803. Winter hardiness is similar to Madison. Roane is resistant to the prevalent field populations of powdery mildew, susceptible to stem rust, intermediately resistant to soilborne mosaic, wheat spindle streak mosaic viruses, and to leaf and glume blotch. Roane possesses a moderate level of resistance to scab. It is resistant to Hessian fly biotypes GP, B, C, and E. It is susceptible to bio-types D and L. Recognized classes of seed are Foundation and Certified. The PVPA statement for Roane is “Unauthorized propagation prohibited. U.S. protected variety. Seed of this variety is to be sold by variety name only as a class of certified seed. PVPA 1994.”

Winter Wheat

Varieties Grown in Illinois

SY 007 PVP

SY 007 is a soft red winter wheat variety bred and developed by Syngenta Seeds, Inc. It has shown best adaptation to primary wheat growing regions of Southern IL, IN, KY, MO, OH and the Del-Mar-Va region of the East Coast. It is primarily adapted to double crop rotations. SY 007 was primarily selected for average height, earlier than average maturity and above average appearance. The coleoptile color of SY 007 is white with erect juvenile plant growth habit. Color at booting is green and the flag leaf is erect, twisted and has wax present. Seed shape is elliptical. Seed cheeks are rounded and seed color is amber. SY 007 is 93.3 cm in plant height and head shape is strap, inclined and awned. It has shown above average stripe rust and powdery mildew resistance, moderate resistance to septoria and soilborne mosaic virus. SY 007 shows moderate susceptibility to fusarium head blight and susceptibility to the races of leaf rust present in the SY 007 (continued)

primary area of adaption. Recognized classes of seed are Foundation, Registered and Certified. The PVP statement for SY 007 is “Unauthorized propagation prohibited. U.S. protected variety. Seed of this variety is to be sold by variety name only as a class of certified seed. PVPA 1994.”

County	Name
Clinton	Hoffman Seed House, Inc.

SY 100 PVP

SY 100 is a soft red winter common wheat, bred and developed by Syngenta Seeds, Inc. It is best adapted to the Midwestern soft red wheat growing regions north of I-70 and in the Mid-Atlantic, based on tests throughout the soft red wheat growing regions in the Eastern US. SY 100 was selected for average height, average maturity, above average appearance and average kernel soundness. The coleoptile color is absent with erect juvenile plant growth habit. Leaf color at booting is blue green and the

Winter Wheat

Varieties Grown in Illinois

SY 100 (continued)

flag leaf is recurved, twisted and waxy. Plant height is 75.9 cm and is 135 days to 50% heading. Spike shape is oblong (strap), lax, erect and apically awnletted. SY 100 is moderately resistant to stripe rust, powdery mildew and barley yellow dwarf virus. It is moderately susceptible to fusarium head blight, soil-borne mosaic virus, and Septoria. It is susceptible to leaf rust. Variants are recognized in this cultivar of up to 8 cm taller, awned plants in quantities up to 1%. Recognized classes of seed are Foundation, Registered and Certified. The PVP statement for SY 100 is “Unauthorized propagation prohibited. U.S. protected variety. Seed of this variety is to be sold by variety name only as a class of certified seed. PVPA 1994.”

County	Name
Henry	Ford & Sons, Inc.

SY 547

PVP

SY 547 is a soft red winter wheat variety bred and developed by Syngenta Seeds, Inc. It has shown wide adaptation in the Great Lakes region, Midwest, Mid-South, Northeast and Mid-Atlantic. The highest yield advantage has been in the double crop region of Southern IL. The coleoptile color of SY 547 is white with semi-erect juvenile plant growth habit. Color at booting is blue-green and the flag leaf is erect, twisted and waxy. Plant height is 83.2 cm and is 130.7 days to 50% heading. Spike is tapering in shape, mid-dense, inclined and awnless. SY 547 has shown average tolerance to fusarium head blight and to current races of leaf rust and stripe rust. It has shown above average resistance to soilborne mosaic virus, powdery mildew and Septoria nodorum. SY 547 is known to be moderately susceptible to barley yellow dwarf virus. Both awned and taller plants have been rogued from the breeder’s seed. Up to 1.0% variant plants may be encountered in subsequent generations. Recognized classes of seed are Foundation, Registered and Certified. The PVP statement for SY 547 is “Unauthorized propagation prohibited. US

Clinton	Hoffman Seed House, Inc.

SY Viper

SY Viper is a soft red winter common wheat, bred and developed by Syngenta Seeds. It is best adapted to the winter wheat growing regions of southeast Missouri, eastern Arkansas, western Tennessee and Kentucky, the Delta region of Mississippi, north Louisiana, eastern North Carolina and northeastern South Carolina. SY Viper was selected for plant height, medium maturity, and general desirable phenotype. The coleoptile color is white with semi-erect juvenile plant growth habit. Leaf color at booting is blue green and the flag leaf is erect, twisted and waxy. Plant height is 100 cm and is 109 days to 50% heading. Spike shape is tapering, lax, nodding and awnleted. Seed color is red, seed shape is ovate with rounded cheeks, and average kernel weight per 1000 is 37 grams. SY Viper is moderately resistant to current races of powdery mildew and moderately susceptible to current races of leaf rust in area of adaptation. Variants are recognized in this cultivar of taller plants of 3 inch or greater than surrounding plants and awned plants of up to 1.0%. Recognized classes of seed are Foundation, Registered and Certified. The PVP statement for SY Viper is “Unauthorized propagation prohibited. US protected variety. Seed of this variety is to be sold by variety name only as a class of certified seed. PVPA 1994.”

Quality Assurance Program

Listed below are the companies which have applied for Quality Assurance (QA) inspection of wheat products. Upon successful field inspection and laboratory analysis, their products will be eligible for the official green Quality Assurance tag. This means that their wheat products have been field inspected and laboratory tested by IllinoisCrop in accordance with descriptions provided by the breeder. The Quality Assurance program is a symbol to the farmer that the variety, brand or blend has been inspected and tested by an unbiased authority.

These companies include:

Baird Seed Company

Ford & Sons, Inc.

Kitchen Seed Company, Inc.

Walter Seed

For more information about the Quality Assurance program, contact Illinois Crop at 217.359.4053.

For further details about the products offered by the above companies, contact them directly. Contact information can be found in the membership section of this directory.
