Forward

All entries in this booklet have made application for certification. However, certification status will not be granted until field inspection and laboratory tests are complete.

The Illinois Crop Improvement Association (Illinois Crop) certifies seed of all crops for varietal purity and identity only. Information concerning germination and mechanical purity, such as percent inert matter and percent weed seed, must comply with state and federal seed laws. Proper labeling of seed with this information is the responsibility of the seed producer or seed dealer.

Please remember that for varieties where plant variety protection has been applied for, or has been granted, the proper statement to this effect must be attached to each container.

Illinois Crop Procedures

1. Contact Illinois Crop before planting for an application to grow Foundation, Registered, Certified or Quality Assurance seed.
2. For Foundation seed production, plant Breeder or Foundation seed. For Registered seed production, plant Foundation seed. For Certified seed production, plant Foundation or Registered seed. For Quality Assurance seed, plant quality seed of known varietal purity and identity.
3. Save tags to establish proof of seed origin and class (all crops) and submit a variety description/statement of origin at the time of application.
4. Select clean, weed-free ground. Check the Illinois Crop regulations to see if the field meets all of the requirements, such as isolation from other varieties and crop history of the land from the previous year.
5. Clean planting equipment before planting.
6. Submit the proper application and fee.
7. Rogue the field for other crops, varieties and weeds.
8. Make sure the field inspection has been completed by an Illinois Crop inspector before harvesting.
9. Clean the combine, transporting equipment and storage facilities to remove crop and weed seeds before harvesting.
10. Submit an uncleaned and/or cleaned sample as required (See Procedures Manual) to the Illinois Crop laboratory for analysis.
11. Contact Illinois Crop with tag orders after receiving laboratory reports.
12. The certification, for all classes, is considered “completed” following compliance with all final lab requirements and attachment of tags to bags. QA tag use is optional, but final lab requirements apply.

Plant Variety Protection

Protected varieties are marked with the following symbol: 

The developer of a new distinct variety may obtain protection (essentially a patent) for that variety if he or she chooses to do so, provided the variety meets the requirements of the Plant Variety Protection Act (PVPA).

The developer of the variety may sell either certified or non-certified seed of the variety (U.S. protected variety statements below).

The developer may choose to utilize the provisions of the Title V of the Federal Seed Act in which the variety may only be sold by variety name only as a class of certified seed.

The PVPA 1994 insures that the variety may not be sold farmer-to-farmer without permission from the developer.

If the developer of a protected variety has reason to believe that anyone is infringing on his rights, he or she may resort to civil action.

It is the responsibility of the seller to inform the buyer if the variety is protected. Each container of seed sold must be labeled with a tag indicating the type of protection for which the owner has applied.

Failure to print proper PVPA statements violates the intellectual property rights of those who protected the variety.

Listed below are types of protection and their coordinating PVPA statements:

U.S. protected variety:

Unauthorized propagation prohibited. U.S. protected variety.

U.S. protected variety, PVPA 1994:

Unauthorized propagation prohibited. U.S. protected variety. PVPA 1994.

U.S. protected variety, Title V:

Unauthorized propagation prohibited. U.S. protected variety. Seed of this variety is to be sold by variety name only as a class of certified seed.

Plant Variety Protection - Continued

U.S. protected variety, Title V, PVPA 1994: **Unauthorized propagation prohibited. U.S. protected variety. Seed of this variety is to be sold by variety name only as a class of certified seed. PVPA 1994.**

For the time when a PVP application is submitted until the PVP office has approved it, the following statement is used: **Unauthorized propagation prohibited. U.S. variety protection applied for. PVPA 1994.**

Check a variety's PVP status on the U.S. PVP's web site at: <https://www.ars-grin.gov/cgi-bin/npgs/pvp/pvplist.pl>

Bulk Transfer - Uncleaned Seed

A bulk transfer is necessary when unconditioned seed is transferred from the seed producer to another for the purpose of cleaning, bagging or selling. A bulk transfer form must be filled out at the time of transfer. A \$59 fee will be assessed to the seed producer for each bulk transfer. Refer to the Illinois Crop Improvement Handbook of Seed Certification for complete details regarding membership and Approved Conditioner Sampler requirements.

Bulk Sale - Cleaned Certified Seed

The bulk sale of Certified class seed applies only to wheat, barley, oats, rice and soybeans. When a producer wishes to sell bulk, cleaned, Certified seed to another to use for planting stock, it is considered a bulk sale of Certified seed. The seed may be transferred once prior to movement to the ultimate consumer. It is the responsibility of the seedsman and retailer to maintain varietal purity if a transfer is made. The original bulk sale certificate holder is to provide photocopies to accompany any further sale from the intermediary to the farmer. A bulk retail sales certificate must be filled out for each lot of seed sold. These certificates are available from the Illinois Crop office. Fifteen cents per bushel will be assessed on each bulk sale.

Limited Generation

There are only four classes of certified seed recognized in the limited generation program.

1. **Breeder's Seed**—which may produce Foundation seed.
2. **Foundation Seed**—which may produce Registered and Certified seed.
Note: Some varieties do not have a Registered class of seed.
3. **Registered Seed**—which may produce Certified seed.
4. **Certified Seed**—which cannot be used to produce more Certified seed.

The Certified class of seed is not eligible to produce another crop of Certified seed. A certified seed producer, to stay in business, should purchase Foundation or Registered seed to remain a certified seed producer.

Varieties released in 1963 and later are included in the limited generation program.

It should be understood by everyone that this limited generation program system of seed certification does not apply to the old established varieties released prior to 1963 such as Monon and Pawnee wheats. Certified seed of these old standard varieties, released before 1963, may be re-certified from Certified seed as long as they comply with both the field and laboratory standards, or until they are replaced by a new variety. In other words, varieties released prior to 1963 are not included in limited generation. Varieties released in 1963 and later are included in the limited generation program.

Research Assessment Rates for Public Oat Varieties

Research and development fees are sent to developing universities to help support new agronomic research. The following list contains only oat and soybean varieties certified in Illinois. The assessment fees will be collected at the time the tags are issued.

Approved Conditioner and Sampler Program

The objective of the Approved Conditioner and Sampler Program is to set a uniform minimum standard for conducting seed conditioning operations necessary to maintain the genetic purity of seed and other products throughout the harvesting, storage, handling and conditioning processes as part of an authorized Illinois Crop authentication program. Approval is granted on an annual basis and may be granted for conditioning, sampling, closing and sealing, labeling and bulk transfer for all crops, specific crops, specified conditioning activities or sampling only.

Industrial Hemp

Varieties Grown in Illinois

NWG 4113*

NWG 4113 is an Industrial Hemp variety that was developed by New West Genetics, Inc. NWG 4113 is a dioecious, dual-purpose variety developed for grain and cannabidiol (CBD) production. This variety is derived from a cross of NWG 988 and NWG 452 and selected for early flowering, minimal branching, high yield and female floral biomass, and levels of >6.5 % CBD and maintain total THC of < 0.30% when analyzed by HPLC. NWG 4113 is best adapted to Northern Colorado and is expected to do well in areas located between latitudes of 37° and 43° in adjacent states with similar climates. This variety has male and female flowering plants and the time of flowering is 53 days. There are 3 days between female and male flowering. The plant height averages 170cm and ranges 120 to 220cm. NWG 4113 has few branches with short internodes. The stems are green with shallow grooves and has a medium sized leaf with medium green intensity with no anthocyanin coloration. The calyx is very densely pubescent, the seed is ovate and weighs 16 grams. There are no off-types expected with NWG 4113 and the variety has not been screened for disease, insect, or herbicide resistance. Variant plants with excessive branching on the edges of the fields should not exceed 1% of the population. New West Genetics, Inc. is responsible for maintaining Breeder seed. Foundation seed will be released to customers to produce Register and or Certified seed. Only one generation of Certified seed is allowed. *Plans are to apply for Plant Variety Protection for this variety, in which NWG will not elect that seed sold by variety name must be certified.

Oats

Varieties Grown in Illinois

Horsepower PVP

Horsepower oat is a white-hulled, spring oat variety that was developed by the South Dakota Agricultural Experiment Station. Horsepower is early-medium maturity. Horsepower has excellent yield potential and average test weight. This variety is resistant to stem rust and moderately resistant to smut and barley yellow dwarf virus. Horsepower is susceptible to crown rust. Lodging resistance is better than Shelby427 and Colt. Recognized classes of seed are Foundation and Certified. The PVP statement for Horsepower is “Unauthorized propagation prohibited. U.S. protected variety. Seed of this variety is to be sold by variety name only as a class of certified seed. PVPA 1994”

County	Name	Acres:	Reg.	Cert.

		Total Acres		10

Oats

Varieties Grown in Illinois

Reins PVP

Reins is a spring oat variety that was developed by the University of Illinois Agricultural Experiment Station and owned by the Board of Trustees of the University of Illinois. This variety is adapted to production in Illinois and surrounding states. It is expected that it will perform well in Indiana, Illinois and Iowa and possibly further east. Reins variety was **Reins** selected based on early maturity, good lodging resistance, and moderately short plant height. Reins variety has good tolerance to barley yellow dwarf virus and is resistant to loose smut (caused by *Ustilago avenae*). This variety is moderately resistant to moderately susceptible to crown rust. Reins variety is about one day earlier than Saber and one day later than Excel. Reins was more resistant to lodging than Saber, Excel and Spurs. Reins has plump, tan kernels. Seed is fluorescent when subjected to ultra-violet light in the laboratory. Up to 0.5 percent tall variants are allowed in Reins. Recognized classes of seed are Foundation and Certified. The PVP statement for Reins is “Unauthorized propagation prohibited. U.S. protected variety. Seed of this variety is to be sold by variety name only as a class of certified seed. PVPA 1994”

Oats

Varieties Grown in Illinois

Rushmore PVP

Rushmore is a white-hulled, spring oat developed by the South Dakota Agricultural Experiment Station (SDAES) and released in 2019. The line was tested as SD140515 with the pedigree of SD080015/SD00701110/SD060130. Rushmore is a medium-late maturing line, heading out about 1 day earlier than Hayden. Rushmore is similar in height to Hayden with better lodging resistance. Rushmore has high yield potential and good test weight. Rushmore is resistant – moderately resistant to crown rust. The variety is moderately resistant to BYDV and smut. Rushmore is protected under the Plant Variety Protection Act with the Title V certification option. A royalty fee will be collected on all sales of Certified seed. There will be no saleable registered class of seed. Unauthorized propagation prohibited U.S protected variety. Seed of this variety to be sold by variety name only as a class of certified seed. PVPA 1994.

County	Name	Acres:	Reg.	Cert.
DeKalb	Butler Family Farms		0	80

Saber PVP

Saber is an early maturing spring oat variety that was developed by the University of Illinois Agricultural Experiment Station. This variety is adapted to production in Illinois and surrounding states. Saber has high yield potential combined with good test weight and yellow kernel color. Saber is moderately early and has moderately short plant type. The pedigree of Saber is Tack/Spurs. Saber is about two days earlier in maturity than Jay and has the same heading date as Don. It is tolerant to barley yellow dwarf virus and moderately resistant to moderately susceptible to crown rust. Resistance is dependant on the races present at a location. Saber is susceptible to loose smut. Recognized classes of certified seed are Foundation and Certified. The PVP statement for Saber is “Unauthorized

Shelby 427

Shelby427 is a spring oat variety developed and released by the South Dakota Agricultural Experiment Station. Shelby427 is a white hulled variety with good lodging resistance. Shelby427 is most similar to the Illinois released variety Don. Test weights are 2.6 to 3.5 pounds per bushel greater than Don and plant height is 6.3 to 6.6 inches taller than Don. This variety has lighter green glumes and 8 percent larger seed size than Don. Shelby427 is rated resistant to moderately resistant to barley yellow dwarf. This variety has excellent yield potential and test weight. Recognized classes of seed are Breeder, Foundation, and Certified. The PVP statement for Shelby427 is “Unauthorized propagation prohibited. U.S. protected variety. Seed of this variety is to be sold by variety name only as a class of certified seed. PVPA 1994.”

Warrior PVP

Warrior is a white-hulled, spring oat developed by the South Dakota Agricultural Experiment Station (SDAES) and released in 2018. The line was tested as SD120419 with the pedigree of SD041405/SD060130. Warrior is a medium maturing line, heading about 1 day later than Horsepower. Warrior is 2” taller than Horsepower. Warrior has high yield potential and average test weight. Warrior is moderately resistant to smut and moderately susceptible to BYDV. The variety is resistant to crown rust. Lodging resistance is excellent. Warrior is protected under the Plant Variety Protection Act with the Title V certification option. A royalty fee will be collected on all sales of Certified seed. There will be no saleable registered class of seed. Unauthorized propagation prohibited U.S protected variety. Seed of this variety to be sold by variety name only as a class of certified seed. Soybeans

Varieties Grown in Illinois

IA3051RA12

Licensed Variety

IA3051RA12 is a Group III maturity conventional variety developed and released by Iowa State University Research Foundation, Inc. This Variety will be grown in the southern half of Iowa and in similar latitudes in other parts of the US. The primary use of this soybean variety is the production of soyfoods. IA3051RA12 variety has not been tested against specific soybean diseases although it possesses resistance to Soybean aphid. IA3051RA12 has a relative maturity of 3.1, indeterminate growth habit, intermediate plant type, white flowers, gray pubescence, brown pods, yellow seed coat, and yellow hilum. This variety has variants of up to 1% purple flower color and up to 1% tawny pubescence. Seed shape is elongate with average seeds per pound listed as 2360. IA3051RA12 is subject to Licensing agreements with Iowa State University Research Foundation, Inc. (ISURF). Recognized classes of certified seed are Foundation, Registered and Certified for this variety.

Soybeans

Varieties Grown in Illinois

IA3054RA12 Licensed Variety

IA3054RA12 is a Group III conventional variety released by the Iowa State University Research Foundation, Inc. This variety will be grown in the southern half of Iowa as well as similar latitudes in the US for use in the production of soyfoods. IA3054RA12 is high in protein and is aphid resistant. The variety has not been tested against specific soybean diseases. The relative maturity is 3.0, and is an intermediate plant type with indeterminate stem termination. The variety has green hypocotyls, white flowers, gray pubescence, and brown pods. The seed shape is elongated, seed coats are yellow, and the hilum is yellow. The average seeds per pound are 2,020. IA3054RA12 variants include up to 1% off-type hilum and seed coat color. Production of IA3054RA12 is subject to a licensing agreement with Iowa State University Research Foundation, Inc. (ISURF). The recognized classes of seed for IA3054RA12 are Foundation, Registered, and Certified.

Quality Assurance Program

Listed below are the companies which have applied for Quality Assurance (QA) inspection of soybean and oat products. Upon successful field inspection and laboratory analysis, their products will be eligible for the official green Quality Assurance tag. This means that their soybean and oat products have been field inspected and laboratory tested by Illinois Crop in accordance with descriptions provided by the breeder. The Quality Assurance program is a symbol to the farmer that the variety, brand or blend has been inspected and tested by an unbiased authority.

These companies include:

Soybeans

Baird Seed Company

Coldwater Seed Farm

Eldon Miller

Walter Seed

For more information about the Quality Assurance program,
contact Illinois Crop at 217.359.4053.

For further details about the products offered by the above companies,
contact them directly. Contact information can be found in the
membership section of this directory.
